To Meet Your Healthy Sight Needs

Punctal Plugs

Permanent Dry Eye Relief

A tiny plug placed quickly and painlessly into a tear duct could be the cure for a condition suffered by millions of people. This microscopic plug slows down the loss of tears that results in dry eye syndrome, a painful, debilitating condition suffered by one in five people.

Dry Eye Syndrome

People have dry eyes because their eyes do not make sufficient tears, or their tears evaporate too quickly. Both situations leave a person with an insufficient tear layer covering the eye and result in dry eyes. Dry eyes usually cause discomfort by the way of burning, itching, a grit in the eye sensation, or even blurry vision

Long-Term Relief By Conserving Tears.

Closure of the tear duct openings conserves precious tears by restricting drainage. This bathes your eyes with your own natural tears without the bother of constantly using artificial eye drops.

- Temporary dissolvable plugs are sometimes used to measure improvement.
- These temporary collagen plugs dissolve within one week.
- If during this test period you experience relief from dry eye symptoms, you may wish to proceed with the long-term comfort afforded by permanent tear duct closure.

Healthy sight is more than just seeing 20/20.
Make an annual eye exam with our qualified doctor a top priority!
New Patients Welcome!

Dry eye symptoms may worsen with:

- work at a computer or driving
- windy settings / air-conditioning
- reduced blink frequency
- heating and airplanes
- certain medications

Conveniently located one light east of University drive

Closure of the Tear Duct with Plugs: Fully reversible-can be removed in seconds...
Closing the tear drainage ducts makes a lot of sense. Your own natural tears treat your dry condition.

- Transitions® lenses, which automatically adapt to changing light and block harmful UV rays and glare.
- Some patients find they can stop using eye drops altogether.
- Punctal plugs act very much like a stopper in a sink.
- Placing a tiny silicone insert into the tear duct prevents precious tears being lost.
- As the tear reservoir builds - the self lubricating process begins.
